USP/ Novelty/ Unique Points of Tinkering Project

Baby soap is essential for maintaining a baby's delicate, thin, and sensitive skin barrier by providing mild, hypoallergenic cleansing that prevents dryness, irritation, and rashes. Unlike adult soaps, baby soaps are typically pH-balanced (around 5.5) and free from harsh chemicals, parabens, and strong fragrances.

- Gentle Cleansing
- pH Balance
- Preventing Irritation/Rashes
- Natural Ingredients
- Skin Barrier Protection

Core Difference Between Baby Soap & Adult Soap:

Features	Baby Soap	Adult Soap
pH levels	Typically 5.5 (matches skin's natural "acid mantle").	Often 9.0–11.0 (highly alkaline).
Detergents	Uses mild surfatants or "soap-free" syndet bars.	Contains harsh sulfates for deep oil removal.
Ingredients	Often enriched with glycerin, aloe vera, or milk to nourish.	May contain dyes, parabens, and antibacterial agents like triclosan.
Eye Sensitivity	Frequently formulated to be "tear-free".	Causes stinging and irritation if it gets in the eyes.
