VACC 201 Tinkering and Mentoring

Name of the Product

FIZZGAIN

The future of supplements is instant

PORTABLE • INSTANT • CLEAN

Mentor : Dr. Yesha Master

Name	Enrollment Number	Course
Kush Patel	25SC02027	BSc Biotechnology
Rudra Khatri	25SC02026	BSc Biotechnology
Aditya Mahajan	25SC02028	BSc Biotechnology
Hitesh Khatri	25SC02025	BSc Biotechnology
Maithily Shrivastava	25SC02030	BSc Biotechnology
Nishita Mahapure	25SC02029	BSc Biotechnology

Engineered for the Full Workout Lifecycle

Pre-Workout

Clean energy blend + creatine + electrolytes. Eliminates bitter taste and scoop errors.

Protein

8–12g fast-absorbing plant-based protein per ball. Smooth taste, rapid dissolution.

Creatine

Clinically effective dosage for strength and muscle mass; simplified for daily use.

Post-Workout

Recovery blend (Protein + Electrolytes) to reduce fatigue and accelerate recovery.

1. Inconvenience

Powders demand measuring, **shaking**, and **cleaning**. It's a chore.

2. Hygiene

Shakers retain residue and **odors**, making them unpleasant for on-the-go use.

3. Portability

Bulky tubs and **scoops** don't fit the modern mobile lifestyle; users miss doses when busy.

Innovation

Introduces a **first-of-its-kind effervescent ball format** for fitness supplements, replacing traditional powders and shakers.

Enables **instant activation in water** with fast and uniform dissolution, eliminating clumps, scooping errors and preparation time.

Delivers **pre-measured, single-dose nutrition**, ensuring consistent intake and better user adherence.

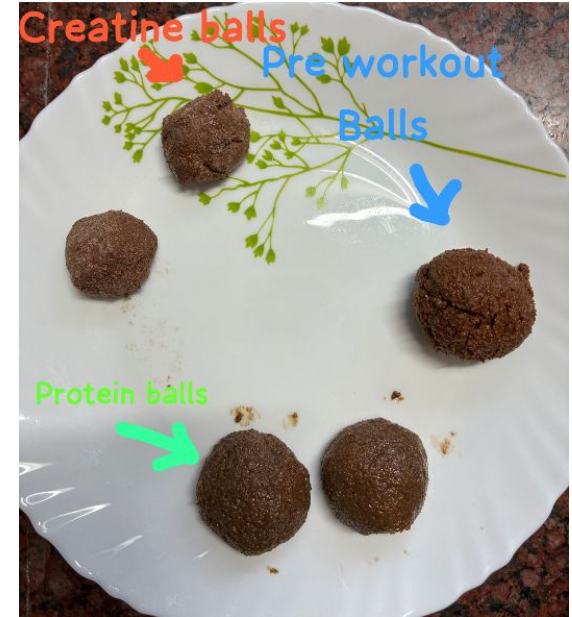

Combines **portability, hygiene and convenience** in one compact design, ideal for college students and on-the-go users (your main user group for school projects).

Integrates a **visually engaging fizz experience**, making the product social-media friendly and strengthening brand recall.

Supports **scalable product innovation** across multiple formulations (protein, creatine, pre-workout and post-workout) using the same delivery platform.

PROTOTYPE

This slide shows the prototype of FizzGain, which is designed as a nutrition ball. When added to water, it dissolves quickly to form a ready-to-drink supplement. The idea behind this design is to make fitness nutrition more convenient, portable, and easy to use, especially for students who may not have time for traditional protein powders.

INGREDIENTS:

Oats - Acts as a binding agent, absorbs moisture, and holds the mixture. Also, adds up the nutritional value of the prototype.

Honey - A natural sweetener which is also a binder and improves the taste, neutralising other components' tastes.

Cocoa Powder - Enhances the flavour, colour and appearance of the protein balls to make them seem appealing.

Protein Powder - Supports muscle growth and repair along with providing energy.

Additional Ingredients :

Glucose - A carbohydrate which provides quick replenishment of energy. This also provides a sweet taste.

Milk Powder - Contains and provides minerals like calcium. This too, improves taste and gives a slight creamy texture to the protein balls.
